

## MIGRATORY WILDLIFE VULNERABILITY ASSESSMENT

- ◆ Migratory wildlife introduce difficult challenges for VA:
  - Highly extravagant lifestyles
  - Where? Breeding range, wintering range, stopover sites, migration itself, all of above?
  - Synchronicity?
  - Data sparse from parts of range

---

---

---

---

---

---

---

---

## RED KNOT - SUPERMIGRANTS

---

---

---

---

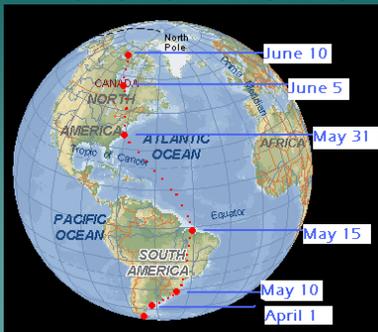

---

---

---

---

## RED KNOT MIGRATION AND STOPOVER SITES

---

---

---

---

---

---

---

---

## RED KNOT – WHERE ARE THE VULNERABILITIES?

- ◆ Tierra del Fuego?
- ◆ Argentina coast?
- ◆ Brazil?
- ◆ Mid-Atlantic states?
- ◆ Hudson's Bay?
- ◆ High Arctic?
- ◆ Fall or spring?
- ◆ Wind patterns?
- ◆ Synchronicities?

Comprehensive VA needed

---

---

---

---

---

---

---

## Vulnerabilities of Shorebirds to Climate Change

Hector Galbraith<sup>1</sup>, Stephen Brown<sup>1</sup>,  
David W. DesRochers<sup>2</sup>, J. Michael Reed<sup>3</sup>

<sup>1</sup>Manomet Center for Conservation Sciences

<sup>2</sup>Dalton State College

<sup>3</sup>Tufts University

---

---

---

---

---

---

---

---

## Objectives

- ◆ Evaluate potential change in extinction risk of North American shorebirds due to climate change
  - directly due to effects of climate change
  - not those due to changed human activities associated with climate change

---

---

---

---

---

---

---

---

### Why Shorebirds?

- ◆ Reported widespread declines
- ◆ Proposed to be sentinels of global environmental change – particularly because of their hemispheric ecosystem use during life cycle (Brown et al. 2001; Piersma & Lindström 2004)
- ◆ Migratory aggregations of some species are a spectacular biological phenomenon
- ◆ Iconic species valued by public?

---

---

---

---

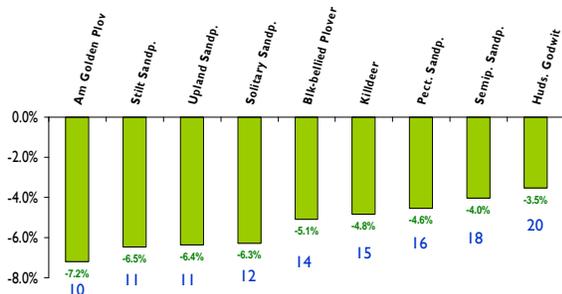

---

---

---

---

### SHOREBIRDS ARE IN TROUBLE

Based on migration counts in eastern N.America; Bart et al 2007. *J Av. Biol*

---

---

---

---

---

---

---

---

### Our Approach

- ◆ Evaluates threats to shorebirds by species
- ◆ Works within the context of the Partners-in-Flight & U.S. Shorebird Conservation Plan risk systems
  - based on population size & trend, breeding & non-breeding distributions, threats to breeding & non-breeding sites

<http://www.outdoorlabama.com/watchable-wildlife/what/Birds/Shorebirds/it.cfm>

---

---

---

---

---

---

---

---

## MAIN QUESTIONS ASKED

- ◆ How much does climate change move the needle on the existing vulnerability categories of USCP/PIF?

---

---

---

---

---

---

---

---

## U.S. Shorebird Conservation Plan Risk Categories

- 1) Not at Risk
- 2) Low Concern
- 3) Moderate Concern
- 4) High Concern
- 5) Highly Imperiled
- 6) ~~Holy Smokes!~~  
Really, highly imperiled—Critical

---

---

---

---

---

---

---

---

## Vulnerability Factors

	Score	Arrow
1) Loss/gain in breeding habitat under climate change	3	↑
2) Loss/gain in wintering habitat under climate change	5	↑↑
3) Loss/gain in migration habitat under climate change	3	↑
4) Degree of dependence on ecological synchronicities	5	↑↑
5) Migration distance	4	↑
6) Degree of breeding, wintering, or migration habitat specialization	4	↑↑

<http://www.wildlifeaware.com/2008/09/>

---

---

---

---

---

---

---

---

### Application

- ◆ Evaluated 49 species of shorebird breeding in North American north of Mexico
- ◆ For each factor, included confidence level
- ◆ Determined shifts in risk category

---

---

---

---

---

---

---

---

### Results for 50 North Am. Shorebirds

- ◆ 43 species (86%) predicted to ↑ risk level due to climate change
  - 34 increased by 1 level
  - 9 increased by 2 levels
- ◆ 3 species at lower risk
  - ◆ Solitary sandpiper – more breeding habitat
  - ◆ Bristle-thighed curlew – more breeding & wintering habitat
  - ◆ White-rumped sandpiper – more wintering habitat

<http://www.sevaas.org/index.php?page=baabp&id=gen1ep462>

---

---

---

---

---

---

---

---

### U.S. Shorebird Conservation Plan

Risk Category	Current	Expected with climate change
Not at risk	0	0
Low concern	7	2
Moderate concern	15	7
High concern	23	13
Highly imperiled	4	17
Critical	–	10

---

---

---

---

---

---

---

---

### Species in New 'Critical' Category

- ◆ Snowy Plover
- ◆ Wilson's Plover
- ◆ Piping Plover
- ◆ Mountain Plover
- ◆ Am. Oystercatcher
- ◆ Long-billed curlew
- ◆ Bar-tailed godwit
- ◆ Ruddy turnstone
- ◆ Sanderling
- ◆ Short-billed dowitcher

---

---

---

---

---

---

---

---

### TAKE HOME MESSAGES

- ◆ For complex spp. We need complex, comprehensive VA
- ◆ They are doable
- ◆ Build off of existing structures if possible (PIF, NAWP, etc.)
- ◆ Must be resilient to lack of data

---

---

---

---

---

---

---

---
