G70 chain is specifically designed for cargo securement, also called Transport Chain and Grade 70. G70 assemblies have a yellow zinc finish for easier identification and for protection of the chain.

Never use G70 chain for overhead lifting or towing, pulling, or dragging operations.

Do not add or weld any pieces to the chain. Overheating may anneal the steel and may reduce the working load limits.

If repair links are needed, use only manufacturer approved repair links.

### Acceptable types of repair links

- Mid-Link
- Coupling Link
- QuickLink
- Connecting Link

### Unsuitable for all applications

- Repair (Lap) Link
- Cold Shut
