Marilyn Brower is the Chief, Division of Engineering for the U.S. Fish and Wildlife Service (Service). She provides management oversight in the areas of dam, bridge, and seismic safety, as well as the construction, energy, and environmental compliance and management programs. She also chairs the Service's Carbon Neutral Team, which is charged with evaluating business practices that contribute to the Service's greenhouse gas emissions and developing options to reduce those emissions.

Ms. Brower's experience includes environmental planning and clean up at the field level, developing risk assessment technical guidance, and developing policy. She gained this experience from her work in the private sector, the U.S. Marine Corps, the U.S. Environmental Protection Agency, and the Service. Ms. Brower holds a Masters Degree in Civil and Environmental Engineering from The George Washington University, and a Bachelor's Degree in Civil Engineering from Carnegie Mellon University.
